

Koichi Takahashi, MD, PhD

Assistant Professor

Leukemia and Genomic Medicine

*Precision Characterization of Clonal Architecture in Acute Myeloid Leukemia with Single-Cell Genomics*

Dr. Takahashi is a physician scientist at MD Anderson Cancer Center specializing on genomics of hematologic malignancies particularly in acute myeloid leukemia (AML), myelodysplastic syndromes (MDS) and clonal hematopoiesis. His research focuses on to reveal the evolutionary history of leukemia development and its implications for clinical phenotype through the use of single-cell technologies.
